Paper 2 Structured Questions AS Core

May/June 2010

1 hour 15 minutes

Candidates answer on the Question Paper.

Additional Materials: Data Booklet

## **READ THESE INSTRUCTIONS FIRST**

Write your name, Centre number and candidate number on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs, or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE ON ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

A Data Booklet is provided.

The number of marks is given in brackets [ ] at the end of each question or part question.

At the end of the examination, fasten all your work securely together.

This document consists of 11 printed pages and 1 blank page.

## Answer all the questions in the spaces provided.

| For        |
|------------|
| Examiner's |
| Llco       |

Hydrazine, N<sub>2</sub>H<sub>4</sub>, can be used as a rocket fuel and is stored as a liquid. It reacts exothermically with oxygen to give only gaseous products.

The enthalpy change of a reaction such as that between hydrazine and oxygen may be calculated by using standard enthalpy changes of formation.

| (a) | Define the term standard enthalpy change of formation, $\Delta H_{\rm f}^{\circ}$ . |
|-----|---|
|     |   |
|     |   |

.....[3]

**(b)** Hydrazine reacts with oxygen according to the following equation.

$$N_2H_4(I) + O_2(g) \rightarrow N_2(g) + 2H_2O(g)$$

(i) Use the data in the table to calculate the standard enthalpy change of this reaction.

| compound                          | ΔH <sub>f</sub> <sup>↔</sup> /kJ mol <sup>-1</sup> |
|-----------------------------------|--|
| N <sub>2</sub> H <sub>4</sub> (I) | 50.6   |
| H <sub>2</sub> O(g)               | -241.8   |

| ΛH <sup>⊕</sup> = | <br>kJ mol <sup>-1</sup> |
|-------------------|--------------------------|
| <b></b>           | <br>11011101             |

(ii) Although the above reaction is highly exothermic, hydrazine does not burn spontaneously in oxygen.

Suggest a reason for this.

|  | <br> | <br> |
|--|------|------|

|     | (iii) | Suggest why using hydrazine as a rocket fuel could be regarded as being 'environmentally friendly'. | For<br>Examiner's<br>Use |
|-----|-------|---|--------------------------|
|     |       |   |                          |
|     |       | [4]   |                          |
| (c) | The   | bonding in hydrazine is similar to that in ammonia.   |                          |
|     | (i)   | Showing outer-shell electrons only, draw a 'dot-and-cross' diagram of an ammonia molecule.          |                          |
|     |       |   |                          |
|     |       |   |                          |
|     | (ii)  | Draw a diagram to show the three-dimensional shape of an ammonia molecule.                          |                          |
|     |       |   |                          |
|     |       |   |                          |
|     | (iii) | Draw a diagram to show the shape of a hydrazine molecule.   |                          |
|     | (111) | Show clearly which atom is joined to which and show clearly the value of <b>one</b> bond angle.     |                          |
|     |       |   |                          |
|     |       |   |                          |
|     |       | [4]   |                          |
| (d) | Ded   | luce the oxidation state of nitrogen in hydrazine.  |                          |
|     |       | [1]   |                          |
|     |       | [Total: 12]   |                          |
|     |       |   |                          |

For Examiner's Use

2

|     |      | ali metals are a series of six elements in Group I of the Periodic Table. The first n energy of these elements shows a marked trend as the Group is descended. |
|-----|------|--|
| (a) | Def  | ine the term first ionisation energy.  |
|     |      |  |
|     |      |  |
|     |      | [2]  |
| (b) | (i)  | State and explain the trend in first ionisation energy as Group I is descended.  |
|     |      |  |
|     |      |  |
|     |      |  |
|     | (ii) | Suggest how this trend helps to explain the increase in the reactivity of the elements as the Group is descended.  |
|     |      |  |
|     |      |  |
|     |      | [3]  |
| (c) |      | redox reaction, 0.83g of lithium reacted with water to form 0.50 dm <sup>3</sup> of aqueous um hydroxide.  |
|     |      | $2\text{Li(s)} + 2\text{H}_2\text{O(l)} \rightarrow 2\text{LiOH(aq)} + \text{H}_2\text{(g)}$   |
|     | (i)  | Calculate the amount, in moles, of lithium that reacted.   |

| (ii)  | Calculate the volume of hydrogen produced at room temperature and pressure.    | For<br>Examiner's<br>Use  |
|-------|--|---|
| (iii) | Calculate the concentration, in mol dm <sup>-3</sup> , of the LiOH(aq) formed. |   |

8 4 Organic reactions involve substances which may be atoms, molecules, ions or free radicals. We also apply the terms electrophilic, nucleophilic, addition, elimination and substitution to organic reactions. Consider the following reactions.  $CH_4 + Cl_2 \rightarrow CH_3Cl + HCl$ reaction 1  $CH_3CH_2OH \rightarrow CH_2=CH_2 + H_2O$ reaction 2  $CH_3I + OH^- \rightarrow CH_3OH + I^$ reaction 3  $CH_3COCH_3 + HCN \rightarrow CH_3C(OH)(CN)CH_3$ reaction 4 (a) Using the terms mentioned above, state as clearly as you can the nature of each of the following reactions. reaction 1 ..... [2] reaction 2 ..... (b) By considering the four reactions above, suggest a formula for each of the following substances. In **each** case, state which reaction you are considering. (i) one substance that is an addition product reaction..... addition product (ii) one substance that is a leaving group reaction..... leaving group (iii) one substance that behaves as an electrophile electrophile reaction.....

For Examiner's Use

| (c) | What is meant by the term <i>nucleophile</i> ?                               | For<br>Examiner's<br>Use |
|-----|--|--------------------------|
|     | [1]  |                          |
| (d) | Reactions 3 and 4 involve nucleophiles.                                      |                          |
|     | For <b>each</b> reaction, give the formula of the nucleophile.               |                          |
|     | reaction 3   |                          |
|     |  |                          |
|     | reaction 4   |                          |
|     |  |                          |
|     | [2]  |                          |
| (e) | One characteristic reaction of ethene is its ability to decolourise bromine. |                          |
|     | $CH_2=CH_2 + Br_2 \rightarrow BrCH_2CH_2Br$                                  |                          |
|     | In this reaction, ethene behaves as a nucleophile.                           |                          |
|     | Suggest an explanation for how ethene can behave in this way.                |                          |
|     |  |                          |
|     | [1]  |                          |
|     | [Total: 9]   |                          |

| 5 | Lactic acid, 2-hydroxypropanoic acid, CH <sub>3</sub> CH(OH)CO <sub>2</sub> H, occurs naturally in sour milk and in |
|---|---|
|   | our muscles when we take hard exercise.   |
|   | Lactic acid is chiral and shows stereoisomerism.  |

For Examiner's Use

(a) Draw fully displayed structures of the two optical isomers of lactic acid. Indicate with an asterisk (\*) the chiral carbon atom in the lactic acid molecule.

[3]

**(b)** Lactic acid may be synthesised from ethanol by the following route.

$$\mathsf{CH_3CH_2OH} \xrightarrow{\mathsf{step 1}} \mathsf{CH_3CHO} \xrightarrow{\mathsf{step 2}} \mathsf{CH_3CH(OH)CN} \xrightarrow{\mathsf{step 3}} \mathsf{CH_3CH(OH)CO_2H}$$

Give the reagent(s) and essential condition(s) for **each** step.

|        | reagent(s) | condition(s) |
|--------|------------|--------------|
| step 1 |            |              |
| step 2 |            |              |
| step 3 |            |              |

During exercise, lactic acid is produced in our muscles from pyruvic acid,  $\mathrm{CH_3COCO_2H}$ . This reaction occurs in the presence of the enzyme lactic acid dehydrogenase.

For Examiner's Use

| (c) (i) | What type of chemical compound is the enzyme lactic acid dehydrogenase?           |
|---------|---|
|         |   |
| (ii)    | How would you detect a small quantity of pyruvic acid in a sample of lactic acid? |
|         | State the reagent(s) you would use and what would be seen in your test.           |
|         | reagent(s)  |
|         | observation   |
| (iii)   | How would you detect a small quantity of lactic acid in a sample of pyruvic acid? |
|         | State the reagent(s) you would use and what would be seen in your test.           |
|         | reagent(s)  |
|         | observation   |
| (iv)    | What chemical reagent would be used to convert pyruvic acid into lactic acid?     |
|         | $CH_3COCO_2H \rightarrow CH_3CH(OH)CO_2H$   |
|         |   |
|         | [6]   |
|         | [Total: 15]   |
