3 A uniform plank AB of length 5.0 m and weight 200 N is placed across a stream, as shown in Fig. 3.1.

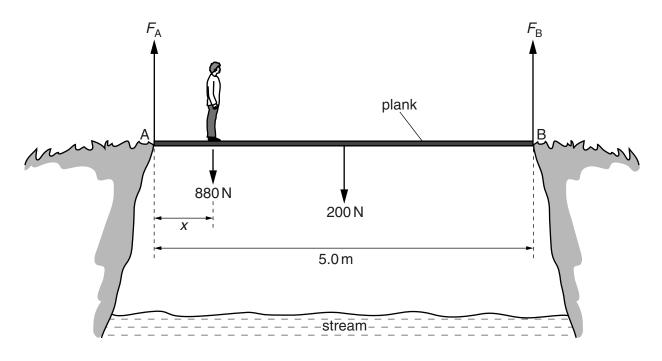

Fig. 3.1

A man of weight 880 N stands a distance x from end A. The ground exerts a vertical force $F_{\rm A}$ on the plank at end A and a vertical force $F_{\rm B}$ on the plank at end B. As the man moves along the plank, the plank is always in equilibrium.

(a)	(i)	Explain why the sum of the forces $F_{\rm A}$ and $F_{\rm B}$ is constant no matter where the man stands on the plank.
		[2]

(ii) The man stands a distance $x = 0.50\,\mathrm{m}$ from end A. Use the principle of moments to calculate the magnitude of F_B .

(b) The variation with distance x of force F_A is shown in Fig. 3.2.

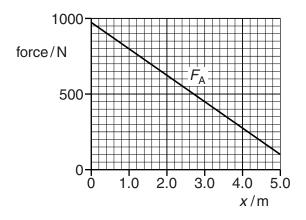

Fig. 3.2

On the axes of Fig. 3.2, sketch a graph to show the variation with x of force $F_{\rm B}$. [3]

4 A metal ball of mass 40 g falls vertically onto a spring, as shown in Fig. 4.1.

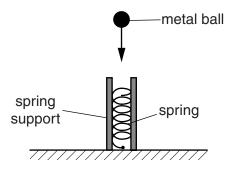

Fig. 4.1 (not to scale)

The spring is supported and stands vertically. The ball has a speed of 2.8 m s⁻¹ as it makes contact with the spring. The ball is brought to rest as the spring is compressed.
